

EPOS WP 1 - Scope and (de)limitations

Lead: INEOS

Long-list of metrics and system settings for IS II

D1.5

EPFL

March, 2018

Summary

This deliverable, D1.5, is completed within the framework of the first work package of the EPOS project, set out to provide the current state of industry and to obtain an industrial baseline. It provides an update for the long-list of metrics and system settings. Discussion on this update focused on the inclusion of additional safety KPIs. In view of the evaluation process included in D2.1, these KPIs were not added due to difficulty in predictability for symbiosis cases.
