

EPOS WP 4 - Tool validation and assessment

Lead: ArcelorMittal Maizieres Research SA

Generic IS assessment matrix

D 4.2

Ghent University (UGent)

March, 2018

Summary

This deliverable is built upon the information presented in D5.6, D1.1 and D3.2. It presents a methodological way of project management, from the first evaluation until operation. In the IS assessment matrix, logical questions are presented based on the legal, economic, spatial, technical and social domains. It has been proven in previous projects that neglecting one of these domains in any phase in the development of a project may lead to extended costs or even failure.

The two dimensional matrix, presented in this report, is ordered by legal, economic, spatial, technical and social domains and follows the well-known appraise, select, define, execute and operate project management paradigm. The entire structure is focused on the assessment of one single project and is further a part of the Deming circle, where continuous improvement is the target.
