

EPOS WP 6 - Exploitation

Lead: Strane Innovation

Final exploitation activities report

D6.6

Strane Innovation (Strane)

September, 2019

Summary

EPOS has undertaken an ambitious exploitation strategy to reach maximal impact and roll-out after the project end.

A Joint Service will be created by three EPOS SMEs with the support of all partners. This Joint Service offers industrial companies an end-to-end solution to set up, assess and decide on optimal cross-sectorial synergies.

Beyond this Joint Service, the EPOS toolbox, the sector blueprints and the generic IS cases have value on their own and will each have a dedicated roll-out.

The EPOS industries plan to employ the toolbox to explore and identify potential symbiosis and make a first assessment. The blueprints serve for benchmarking and as a representation of a typical site.

Academics will use the toolbox in their courses. They will also use both blueprints and toolbox as input in consecutive R&I projects and scientific services.

Generic IS cases will be used to replicate synergies and to promote and illustrate the IS concept.
