EDITORIAL

After a very successful two years, the EPOS project has now reached its halfway point. It continues towards its objective: to include process industries in the transition to a circular economy through the identification of industrial symbiosis. This will be achieved through the increased efficiency of resource use, energy, by-products, waste, infrastructure and services.

With the aim of providing realistic solutions for their needs, EPOS has worked closely with industries. The first studies conducted for the project were preliminary assessments of intra-site optimisation and potential synergies; this resulted in a long-list for further assessment for the identification of genuine solutions.

EPOS 24m Meeting

The EPOS crew is in action again! This time for the 24-month strategic meeting in Hull, UK.

Cefic Report

The EPOS project is featured in the 2017 Sustainability Report from Cefic.

SCI Blog

The Society of Chemical Industry, a multi-science community based around chemistry has started a new blog. The EPOS project was featured in one of the blog's first articles.

SPIRE meeting

The EPOS project joined many others during the September 2017 EU Process Industry Conference. The event, hosted by SPIRE, was dedicated to the future of EU Process Industry. With excellent keynote speakers, panel discussions and project presentations the day was a success!

Press conference

The EPOS project held a successful press conference in Hull, UK. This lead to several news articles about industrial symbiosis and the EPOS project. Read about the press conference here.
